

Waterlase Express

Waterlase Express is the newest addition to Biolase's Waterlase portfolio of Er,Cr:YSGG all-tissue lasers. The product was exhibited at the Chicago Midwinter Dental Meeting and will be unveiled internationally at the International Dental Show in Cologne, Germany.

With extensive qualitative and quantitative research from a team of dentists around the world guiding the design of the system, Waterlase Express represents the new foundation of the company's strategy to expand all-tissue laser use in dentistry. The laser recently received 510(k) clearance for commercial distribution from the U.S. Food and Drug Administration and is available for immediate sale to dentists in the U.S. as well as select international markets in Europe, the Middle East and Asia.

Mosaic Universal Composite

Ultradent Products' new Mosaic universal composite can be used for basic or complex restorative purposes. Its well-balanced nanohybrid formula produces restorations of the highest quality. Combining the strength properties required for posterior use with the aesthetic characteristics desired for anterior use, Mosaic ensures superior results both visually and functionally.

The composite's smooth, pliable consistency allows for total control during manipulation. Once the material is shaped, it won't flow or slump out of place. Available in 20 dental and enamel shades, it provides predictable shade matching using single-, double- or multiple-layer techniques, because it was designed to emulate the same levels of translucency and opacity seen in natural dentition.

The composite comes in 4-gram syringes, with a smooth, contoured handle and barrel to allow for easy cleaning while still being easy to grip and identify. It is also available in 0.2g single-dose units..

Sidexis 4

After a successful launch of Sidexis 4 at the IDS 2015, Dentsply Sirona has updated its standard-setting software, enhancing the already robust platform to become a true all-inclusive imaging hub for every dental practice.

As the central hub for integration and all diagnostic imaging data, Sidexis 4 allows for the compilation of data in a single software, enabling clinicians to visually present patient information in one unified environment. In the latest update, Sidexis 4 brings Dentsply Sirona's intraoral sensor—Schick 33—to the fore. Sidexis 4's new intraoral integration provides an intuitive image capture workflow built from 25 years of experience, with easy access to Schick 33's enhancement tools and exposure advisor feature.

The software platform is open to all major image formats, readily accepting files obtained by intraoral, panoramic and cephalometric X-rays, 2-D and 3-D CBCT systems, intraoral cameras, FaceScanner and more.

EndoSafe Plus

Vista Dental Products recently introduced EndoSafe Plus, a patent-pending device that provides apical negative pressure during simultaneous irrigation and evacuation. Irrigating solutions are delivered coronally

and evacuated apically, eliminating vapor lock and pulling solutions to the critical last few millimeters of the canal. Safe, negative pressure delivery minimizes the risk of apical extrusion and potential for sodium hypochlorite accident.

AutoSyringe features quick-connect, 20ml reservoirs that are easily filled with the medicament of one's choice. Disposable EndoSafe Tips offer a low procedural cost and attach to either the high- or low-speed suction valve.
