

Film-Based Digital

An affordable alternative

X-Ray Support's QuickShot makes it easy and affordable to go digital. Get the benefits of digital while keeping the comfort, quality and affordability of film. The product also complements a hard-sensor digital system when a large digital sensor won't fit.

Superior to standard scanners

QuickShot's patented high-definition camera technology captures images instantly. Any adjustments to the image are done in real time to accurately acquire optimal image detail. Even hard-to-read film can be dramatically improved. The software also makes independent region adjustments and has a measurement tool. There are no moving parts to wear out.

Digitizes all dental film

QuickShot can capture any size dental film—a single PA, four bitewings, an FMX, a TMJ, a pan or a cephal.

Easy use and setup

QuickShot software is designed specifically for use in a dental setting. Standard scanner software is complicated and hard to use. With QuickShot, simply place the film on the light panel to instantly see and crop what you want to digitize. Once the image is adjusted with the simple interface, the digitized image is now ready for full-screen patient presentation. The image can also be emailed for referrals, sent to insurance for faster payments or saved for future archival use.

The product is also easy to set up by plugging in the USB and power and installing the software. Dimensions are 14 inches tall, 10½ inches deep and 15 inches wide. QuickShot creates a standard-format JPG, PNG or TIFF image, which can easily be imported into most practice management software.

For more information, go to x-raysupport.com or call 888-230-9500. ■

MODERNIZE your office with ImageMax™ and QuickShot™

ImageMax™
Automatic X-Ray Film Processor

Solves Processing Problems by Moving the Chemistry, Not the Film!

- Practically self-cleaning
- 80% less chemistry
80% less waste ECO FRIENDLY
- Hand-dipped quality images
- No rollers means no marks, artifacts, or lost film
- Sealed holding tanks virtually eliminate odors and oxidation
- Processes ALL dental film - pans, cephs, IO sizes 0-4
- Simple 5 min do-it-yourself setup
- Lifetime warranty
