

A-DEC

A-dec 500 Chair and Delivery System

Focused on creating a superior doctor and patient experience, the new A-dec 500 delivers the reliability and longevity dental teams expect, with the access, integration, control and comfort to perform and feel their best. The entire delivery system is designed to function holistically and intuitively, reacting to the doctor's every move, without pause. The simplicity becomes second nature.

With effortless adjustments in mind, A-dec built extra safeguards and responsiveness into the new system. LED coolant indicator lights take second-guessing out of adjustments, and displays on the screen automatically activate when an instrument is picked up. In addition, positive positioning lets the doctor smoothly and precisely move the delivery system with one hand, and count on it to stay where it's placed.

Reliability and peace of mind are woven through every element of the new A-dec 500 with:

- **Optimal access.** Get in close and position everything needed within reach.
- **Flexible integration.** The flexible design lets clinicians configure the clinical instruments they choose.
- **Intelligent control.** Customizable and easy to navigate with the option to add more instruments now or later.
- **Superior care.** Comfort and stability add up to a superior patient experience.

As expected, the classic headrest and ultrathin backrest deliver consistent support for patients from any angle, while simultaneously allowing clinicians to move in close for an optimal view of the oral cavity.

HIGHLIGHTS

- **Primea Advanced Air from W&H** is the world's first air-driven, high-speed handpiece with an adjustable bur speed and constant removal rate—even with increasing pressure. A range from 60,000 to 320,000 rpm offers optimal application speed and maximum treatment efficacy at all times. Option integrated exclusively on the A-dec 500.
- **Positionable Deluxe Plus touchpad** minimizes the extraneous information and dynamically displays only what's needed based on the current procedure. A tilting screen and rotating arm adjust for precise viewing from multiple angles and the delivery system arm moves for right- or left-handed operators, allowing optimal visibility from either side of the control head.
- **LED coolant indicator** lights up when a handpiece is lifted out of the holder. These individually adjustable water coolant lights identify which handpiece is in the active position.
