## iTero Element 2

**P**owerful restorative and orthodontic capabilities are brought to life with the iTero Element 2 intraoral scanner built on the trusted iTero Element platform. As of June 2019, more than 13.4 million orthodontic scans and more than 3.6 million restorative scans, including crown, bridges and implants, have been completed globally to date according to data on file with Align Technology.

The iTero Element 2 scanner communicates seamlessly with external treatment planning, custom implant abutment, chairside milling and laboratory CAD/CAM systems. An iTero digital scan can enhance the accuracy and precision of the downstream restorative process with open STL export and restorative file interpretation. Innovative software applications such as TimeLapse and Occlusogram provide clinicians an enhanced digital user experience while simultaneously serving as a tool to aid patient education.

With exclusive software solutions such as Invisalign Outcome Simulator and Progress Assessment, patients can visualize their potential smiles, while doctors can track progress, monitor compliance or educate on treatment tracking. Utilizing next-generation computing, the iTero Element 2 scanning software automatically detects and repositions start and stop points when a clinician moves within a scanned segment. The intuitive wand touchpad enables clinicians to switch between scanning segments or rotate the model on-screen.

A fully-charged integrated lithium-ion battery provides easy mobility between operatories, allowing users to scan for 30 minutes without having to plug in for power or reboot. With smarter scanning, high-definition visuals and enhanced color imaging, the iTero Element 2 scanner can provide more power, convenience and capabilities for the dental practice.

### HIGHLIGHTS

- iTero Element 2 scanner delivers enhanced ergonomics and high-definition color imaging, making it the **perfect partner for the modern practice**.
- The iTero Restorative and Orthodontic Digital Platforms allow practitioners to take advantage of **numerous digital workflows and solutions**, with complete lab connectivity.
- iTero Element scanners connect rapid image acquisition with high-tech training, technical support and **predictable workflow systems**.
