EndoSequence BC Liner

EndoSequence BC Liner is Brasseler's latest innovation in the line of EndoSequence materials. Unlike BC Sealer and BC RRM (root repair material), BC Liner is dual-cure and designed to bridge the gap between pure calcium silicate based bioceramics and more user-friendly, light-curable bioactive restorative materials.

BC Liner is a next-generation bioactive hybrid resin comprised of a proprietary combination of bioactive resins and glass ionomers. It is optimized for use as a base/liner material over the top of BC Sealer or BC RRM. This versatile, durable material chemically bonds to dentin without the need for a bonding agent. The unique moisture-friendly chemistry seals teeth against microleakage and continuously releases and recharges calcium, phosphate and fluoride ions for a lasting benefit. Unlike other RMGICs, EndoSequence BC Liner does not contain bisphenol A, Bis-GMA or BPA derivatives.

Not only is BC Liner bioactive, it is also extremely strong. Most resin-modified glass ionomers have a compressive strength of less than 150 MPa while BC Liner's novel formulation provides a compressive strength of more than 240 MPa.

For more information or to order, call 800-841-4522 or visit shop.brasselerusa.com.

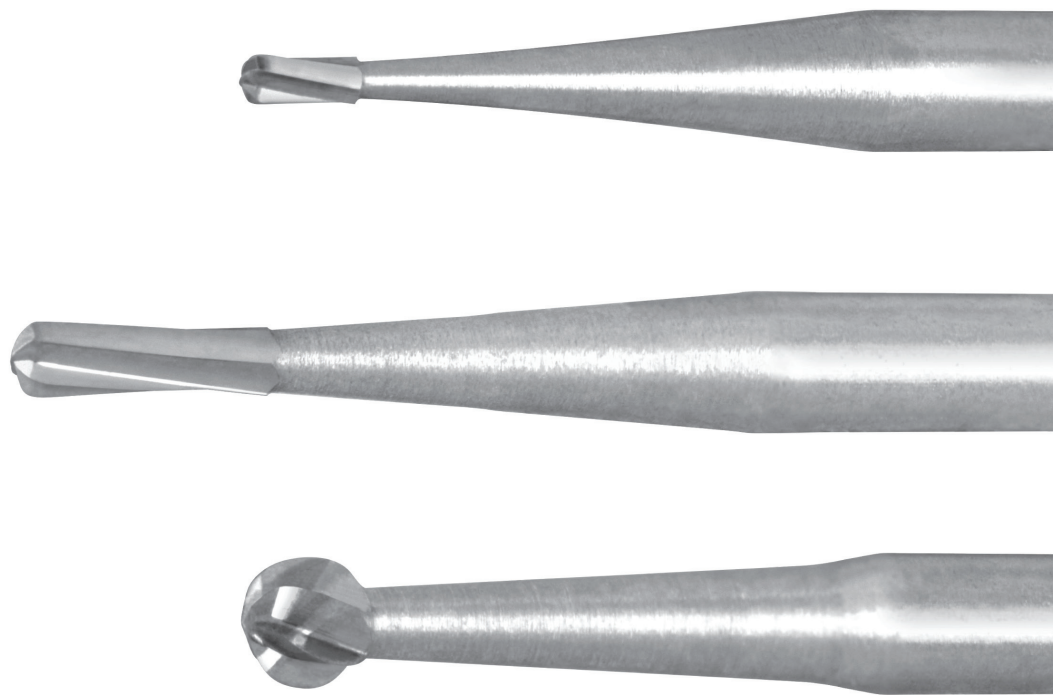

BRASSELER

HIGHLIGHTS

- The bioactive dual-cure formulation and high compressive strength (241 MPa) make BC Liner a **durable** and **versatile** liner material.
- BC Liner is **moisture-friendly** and comes with an ergonomic high-leverage automix syringe, which allows for no-hassle precision placement.
- BC Liner is typically sold for \$100 per 5g syringe (with 40 tips included). Combined with its self-bonding properties, this makes BC Liner both **user-friendly** and **cost-effective**.

C-Series Carbides

The C-Series carbides from Brasseler USA are designed to address the No. 1 problem clinicians experience while using carbide burs: breakage. The unique, durable single-piece construction of the carbides can enhance patient care and minimizes unforeseen handpiece repairs, improving clinicians' daily practice flow.

In addition to its innovative single-piece solid carbide construction, C-Series carbides feature improved blade geometry for extremely rapid and precise cutting, consistent with the performance and quality that dental professionals have come to expect from Brasseler. Manufactured with the highest quality raw materials and workmanship, Brasseler carbides ensure optimum performance and consistency, and satisfaction is guaranteed.

Now available in head sizes less than 1.6mm, C-Series carbides offer a wide selection of the most popular operative carbide shapes, including 330, 557, 245 and rounds.

For more information, visit brasselerusadental.com/products/c-series-carbides or call 800-841-4522.
