

GARRISON DENTAL SOLUTIONS

Composi-Tight 3D Fusion Sectional Matrix

Garrison's new Composi-Tight 3D Fusion Sectional Matrix is engineered to successfully complete a wider variety of Class II composite restorations. This comprehensive kit includes three varieties of separator rings, five sizes of matrix bands, four sizes of interproximal wedges and a ring placement forceps. Composi-Tight 3D Fusion is indicated for use in posterior Class II MO/DO, MOD and wide preparation restorations.

The new system draws on Garrison's more than 20 years of sectional matrix leadership to produce its most comprehensive and easy-to-use system. The three-ring system consists of a short (blue), tall (orange) and dentistry's first wide preparation (green) separator rings. All three incorporate Garrison's exclusive Soft-Face silicone tips for flash reduction and Ultra-Grip retention extensions that eliminate ring "spring-off."

HIGHLIGHTS:

- The **three-ring system** consists of a short (blue), tall (orange) and dentistry's first wide preparation (green) separator rings. All three incorporate Garrison's exclusive Soft-Face silicone tips for flash reduction and Ultra-Grip retention extensions that eliminate ring "spring-off."
- Five sizes of ultra-thin, dead-soft nonstick sectional matrix bands have an **added Grab-Tab on the occlusal edge** to simplify band placement and removal. The four sizes of Garrison's award-winning Composi-Tight 3D Fusion Ultra-Adaptive wedges feature soft "fins" that smoothly adapt matrix bands to tooth irregularities and prevent wedge back-out.
- Composi-Tight 3D Fusion includes dentistry's premier **heavy-duty stainless-steel ring placement forceps**. Regardless of hand size or strength, the forceps give incredible control for the precise placement of super-strong separator rings over even the widest molars.

LUMADENT

Dental loupes and LED headlights

LumaDent designs, manufactures and sells premium quality LED headlight packages and custom loupes for dental and medical professionals of all experience levels. The company's headlamp is compatible with any loupes or glasses on the market, while its modular user-oriented design makes it simple and affordable to keep LumaDent products up to date.

The HL360 is the only light on the market with the versatility to be used both wired and wirelessly. Take full advantage of the unmatched power of LumaDent's wired systems or experience the freedom of wireless with the same headlight. The HL360 received a 2018 Townie Choice Award for best LED headlight.

HIGHLIGHTS

- ProLUX, LumaDent's flagship LED system, features up to 60,000 lux (adjustable) and up to 40 hours on a full charge. **Smaller than a deck of cards**, ProLUX also features an inline control switch, belt clip and charge indicator.
- The uniLUX is a **lightweight hybrid LED system** featuring up to 50,000 lux (adjustable) and up to 12 hours use on a full charge. Available in five colors and weighing in at only 2 ounces, uniLUX is worn on the collar, lapel or pocket.
- The airLUX is the company's new **100% wireless system**. Weighing only 17 grams, the airLUX emits 21,000 lux for 3.5 hours on a full charge. The plug-and-play design allows users to use the airLUX with any of LumaDent's existing wired systems giving them the freedom to easily switch from wired to wireless.
