

GLIDEWELL DENTAL

Dedicated to innovation since 1970

Glidewell Dental, one of the world's largest manufacturers of custom restorative services, is on the cusp of providing half a century of comprehensive, high-quality service, products, technologies and education. Glidewell develops cutting-edge solutions aimed to provide high-quality dentistry to clinicians and their patients.

BruxZir Solid Zirconia

With the debut of this full-strength solution in 2009, BruxZir Solid Zirconia quickly became the material of choice for restorative solutions, offering a tooth-colored alternative to full-cast gold and occlusal-metal PFMs. It's appreciated by clinicians and patients alike for its combination of strength and beauty. By the close of 2010, doctors were prescribing more BruxZir restorations than

PFM restorations from Glidewell Laboratories, as the demand for this versatile material increased.

Today, BruxZir zirconia has been prescribed for more than 19 million restorations, and the original BruxZir Full-Strength material remains the only zirconia material with more than eight years of clinical validation by the independent *Gordon J. Christensen Clinicians Report*.

In May 2018, the company released BruxZir Esthetic Solid Zirconia, optimizing the combination of extraordinary strength and natural translucency. This anterior-grade formulation is created using a proprietary process, made possible by years of research and development. Clinician and patient confidence continue to drive the demand for this versatile product ever higher.

BruxZir Full-Strength and BruxZir Esthetic are honored to have received the Townie Choice Award in the “Crown & Bridge: All-Ceramic Crowns” category for 2018.

Hahn Tapered Implant System

Dr. Jack Hahn has been placing and developing dental implants for more than 45 years. His innovations have played a key role in making implant therapy the predictable mode of treatment it is today. Combining decades of clinical experience with cutting-edge design, the Hahn Tapered Implant is a contemporary dental implant tailored to the demands of modern implant dentistry. Precisely engineered to meet exacting requirements, this advanced system addresses the challenges clinicians face with a blend of time-tested features and innovation.

Clinical advantages

- Versatility:** Place in any region of the mouth.
- Efficiency:** Simplified drilling and swift insertion.
- Precision:** Enjoy precise directional control during placement.
- Stability:** Excellent primary stability for more immediate-load opportunities.

“Like most clinicians, I want an implant system that serves to simplify treatment and increase case efficiency. We all want to help as

many patients as possible, and patients don’t want to sit in the chair any longer than they have to. Being able to address all kinds of cases quickly and capably is a win-win. That’s what the Hahn Tapered Implant is designed to offer: a simple, efficient solution for every indication.” — Dr. Jack Hahn

Glidewell Laboratories

Glidewell Laboratories has operated as a full-service partner to dentists across the United States since 1970, offering restorative, implant and preventive services. Glidewell is the proud recipient of the 2018 Townie Choice Award in the category of “Laboratory: Dental.” When seeking unsurpassed quality from a manufacturer with a 50-year history of uncompromising dedication, look no further!
