HENRY SCHEIN ONE

TechCentral OmniCore

IT is complicated, and dental IT is even more so. It can be overwhelming for clinicians to make sure they have all of the elements of a dental office IT network. OmniCore, by TechCentral, has taken the work out of putting together a dental network. It simply needs to be connected to a clinician's endpoints, and they are ready to go.

Simplified networking infrastructure

The TechCentral OmniCore computer network comes complete with a virtualized server, network-attached storage, business-grade wireless access point and firewall, and hybrid data backup, contained in a sleek, mobile, low-profile rack that can easily be rolled into a dental office. With OmniCore, TechCentral will provide, monitor and maintain networks for a low, regular monthly cost that's easy to budget.

OmniCore is an all-in-one "network in a box" that is fully managed and licensed for the specific needs of the digital dental practice. For a low monthly cost, not only do clinicians get the hardware they need for a dental office network, but TechCentral will completely manage and maintain it so they don't have IT budget surprises.

Security and data protection

A practice can lose thousands of dollars—and valuable staff productivity—when technology failures or common internet threats compromise computer systems and data security. As part of the OmniCore service, TechCentral will keep hardware up to date and encrypt practice data, stored both locally and in the cloud, with AES 256-bit encryption, so clinicians can have greater peace of mind.
