

## ► RELIANCE ORTHODONTIC PRODUCTS

### LED Pro Seal sealant

LED Pro Seal from Reliance Orthodontic Products was designed using the latest in oral chemical technology to provide orthodontists and their patients with a true, long-lasting protective coating on the enamel surface. Unlike normal primers, which do little to protect the enamel, and varnishes that last only a short time, LED Pro Seal's unique formula is nonporous and completely polymerizes when cured. This technology prevents damage from oral fluids and food, strongly resists abrasion and forms a smooth barrier that protects the enamel from stains, white spot lesions and decalcification.

LED Pro Seal's effectiveness has been documented in more independent university studies than any other orthodontic sealant. The product is a single liquid that is applied to the etched tooth and light-cured. It is a protectant and primer in one application. After applying Pro Seal, simply seat and cure the pasted bracket. LED Pro Seal can be used with chemical, dual-cure or light-cure

paste systems regardless of the manufacturer. An additional benefit reported by clinicians is the smooth, hard surface of cured Pro Seal, which makes excess paste removal easier. Years of clinical feedback and several university studies confirm that Pro Seal can last the duration of treatment and greatly reduce the incidence of enamel hygiene problems. At 4 cents per tooth, LED Pro Seal is inexpensive protection, easy to use and an effective weapon in the battle with poor hygiene patients.

#### HIGHLIGHTS

- LED Pro Seal sets a **standard in orthodontic enamel protection** for your patients. It is easy to apply and also functions as a bonding primer. Effective protection for your patients and, at 4 cents per tooth, it's protection orthodontists can't afford not to use.
- "Inspiring orthodontic patients to maintain good oral hygiene compliance isn't easy; however, applying Pro Seal to help this effort couldn't be easier! **The patient benefits from this protection**; the doctor is likewise covered and would not return to previous methods. The best way to escape a problem is to prevent it. Thank you, Pro Seal!"  
— Duane Grummons, DDS, MSD, Spokane, Washington
- "One of the biggest worries for orthodontists and their patients is decalcification. Since using Pro Seal, we have all but eliminated this concern. Pro Seal's protective coating also makes **'excess' cement cleanup supereasy**. Using Pro Seal as part of our 'preventive measures' is a no-brainer and should be a part of everyone's bracket-bonding kit."  
— Jonny A. Feldman, DMD, MS, Cheshire, Connecticut
