AMD LASERS
Picasso+ and LiteTouch Lasers

Soft-Tissue Lasers

In 2009, AMD LASERS permanently altered the dental-laser market with the introduction of the Picasso line of soft-tissue lasers. Today, AMD LASERS continues its innovation with the addition of the Picasso+ series soft tissue lasers, and the LiteTouch all-tissue laser. The integration of Picasso lasers provides an effortless experience to clinicians around the world—effectively and affordably.

Innovative products and a family-based culture are the values that continue to drive the company. AMD LASERS enables any dental practice to provide a ready solution for soft-tissue surgery, periodontal treatment, and laser whitening.

The addition of the new LiteTouch allows AMD LASERS to tap into a brand-new market by providing a solution in cavity preparation and bone surgery for any practice. Through its commitment to research and development, AMD LASERS continues to offer its quality products and service at an affordable price point.

LiteTouch provides fast cutting and high energy with non-fiber delivery, and offers minimally invasive treatment for both hard and soft oral and maxillofacial tissues. LiteTouch provides excellent precision for a wide range of dental procedures. With its ergonomic design, LiteTouch is an affordable and user-friendly all-tissue laser.

The Picasso+ and Picasso Lite+ combine ease of use, portability, training, marketing and treatment planning at an affordable price. Each unit boasts a full touchscreen interface with preset modes: continuous, pulsed, perio, aphthous ulcer, and custom (Picasso+ includes an additional whitening preset). Each system features five-second and 30-second timers for the perio and aphthous ulcer modes (Picasso+ includes timers for whitening).

Alan Miller, president and founder of AMD LASERS, said, “It was hard to improve the number-one-selling soft-tissue laser in the world, but after nearly seven years on the market it was time to give the Picasso series some improvements. The new Picasso+ and new Picasso Lite+ are the same but only better… a plus for anyone who uses them. More power, more easy-to-use functions and industry-first Picasso periodontal treatment timers for predictive, reproducible results are just a few of the improvements. How do you improve perfection? Picasso+ and Picasso Lite+, that’s how.”

AMD LASERS is a global leader at providing laser technology for dental professionals preparing to take their practices to the next level. The integration of the Picasso line of soft-tissue dental lasers enables any dental practice to provide treatment for soft-tissue surgery, periodontal treatment, and laser whitening.
