

CARECREDIT

Making care possible ... today

At the end of the day, it's about helping patients get healthy and happy. As CareCredit recognizes its 30th anniversary, it would like to thank the dental providers and teams who believe the CareCredit health care credit card is a valuable payment solution that helps their patients move forward with care without delay. Because of its provider community, CareCredit is used an average of 32,000 times every day by patients who need and want care.

One of the unique benefits of being part of CareCredit's provider community is having access to practical insights and free resources developed with leading dental educators. These resources can help dentists and their teams attract and engage patients, increase case acceptance and create long-term, loyal relationships.

One of the most popular new resources for 2017 is CareCredit Direct. CareCredit Direct software lets patients learn about and apply for financing all on their own at the dentist's office. This allows the practice team to spend less time explaining financing and more time caring for patients. Learn more at carecredit.com/direct.

In addition, CareCredit has a team of practice development managers who can connect teams to free resources and help them

get the most out of CareCredit and achieve their production and practice goals. CareCredit practice development managers are available to meet with doctors and teams at the practice or over the phone, whichever is most convenient, to share the advice and experience they've compiled from the thousands of practices they visit each year.

To get connected to free insights and resources from leading dental educators or to schedule time with a practice development manager, call 800-859-9975 and select Option 1, then 6. If you don't currently have CareCredit as a financing solution, call 800-300-3046. ■
