

DESIGNS FOR VISION

LED DayLite WireLess Series Headlights

Designs for Vision's new LED DayLite WireLess Mini and LED DayLite WireLess headlights are totally cordless, freeing dental practitioners from being tethered to a battery pack. The patent-pending design is a new concept—a self-contained headlight that can integrate with various platforms including existing loupes, safety eyewear, lightweight headbands, and future loupes or eyewear purchases.

Both the LED DayLite WireLess and WireLess Mini operate independently of any frames or loupes. Either headlight can be easily transferred from one platform to another, expanding the illumination possibilities across all eyewear options.

The LED DayLite WireLess Mini weighs less than 1 ounce and when attached to a pair of loupes, the combined weight is half as much the weight of other integrated cordless lights and loupes. The LED DayLite WireLess produces more than 40,000 lux of neutral white light at high intensity and 27,000 lux at medium intensity, controlled via capacitive touch. The intensity of the LED DayLite WireLess Mini is 27,000 lux and operates with a simple twisting motion. The spot size of either headlight will illuminate the entire oral cavity.

The LED DayLite WireLess is powered by a compact, rechargeable lithium-ion power pod. Three power pods are included with a charging cradle that independently recharges two power pods simultaneously, showing each charge cycle's progress. Both WireLess headlights come with a four-year warranty. More information and several reviews of this innovative product line can be found at designsforvision.com/DentHtml/D-LED/D-Lights.htm.

Designs for Vision has been manufacturing custom magnification and illumination for medical practitioners since 1961. True magnification, precision-coated optics, custom working distance and angle of declination are an integral part of all magnification loupes, including the newest Reality five-star rated Micro3.5EF Scopes. Designs for Vision's Magnification loupes and headlights are available with a 45-day, no-obligation trial. Dentists and hygienists can see the visible difference by arranging for a visit in their own offices. ■
