

ENGLE DENTAL SYSTEMS

The only Traverse Chair on the market

The Engle difference

For the past 50 years, Engle has built its reputation on quality, ingenuity and integrity. With industry-leading engineering and customer service that dentists rely on, Engle products are American-made, designed and manufactured in Hillsboro, Oregon.

The Traverse Chair

Engle Dental is the only company that makes the fully programmable, 10-inch-forward/backward hydraulic Traverse Chair. The traverse feature allows dentists to position themselves behind the patient comfortably without sacrificing space. Because the seat moves forward as the back of the chair reclines, dentists can stay put and let the patient come to them. The chair keeps the patient's

head/oral cavity in the same vertical plane in the operatory (front to back), regardless of the chair position.

Engineered for ergonomic efficiency, the chair allows for unparalleled dental team access and comfort. With an anatomically correct back pivot point and synchronized back and toe board recline, it has undergone extensive comfort testing to provide maximum comfort in procedures lasting 45 minutes or more.

Small operatory? No problem.

The Engle Traverse Chair is engineered to fit in even the smallest spaces, while still maintaining full ergonomic integrity. With its exclusive traverse capability, the chair has a footprint 10 inches smaller than a standard dental chair.

A high-performance chair that won't break the bank

Engle chairs combine world-class engineering, American manufacturing, hand-stitched upholstery and exceptional comfort for a price that makes sense. Engle's focus on bringing the best utility, design and quality at an accessible price makes its products an exceptional value and a sound investment.

Details that make a difference

At Engle, ergonomics and ease of use are paramount. The Engle 360 Auto Control Delivery System's unique design makes left- or right-handed operation easy. With industry-leading access to the patient and instrumentation, Engle has modernized the operator with simplified controls such as fully programmable positions and a light on/off right on the touchpad. With multiple positioning to improve doctor and patient comfort and the flexibility to accommodate the functions of the assistant, the Engle 360 is an uncomplicated system built to perform in the most demanding operatories.

The Engle E300 LED light provides an energy efficient 9.82 watts at 35,000 lux while using 20 times less power than halogen. With 10-plus years of LED life and no infrared light, dentists can rest easy in extended operation knowing that the E300's low heat dispersion will keep them and their patients cool.

Performance = profit

Understanding that performance equals profitability, Engle chairs are designed to maximize patient comfort. With options like heat and massage, lumbar support, a double articulating headrest and Ultraleather upholstery, dentists can focus on patient care knowing that Engle has created a level of comfort that helps patients relax.

Design

Engle understands that form is every bit as important as function. The four unique upholstery patterns, soft and breathable Ultraleather, customizable colors and sleek, modern design mean dentists can design chairs that will impress as well as they perform. Engle chairs are available in wide- or narrow-back options, with or without slings, and can be ordered with antimicrobial upholstery.

Five-year warranty

Engle provides a warranty that exceeds industry standards, with a five-year warranty on all electronic components, material and workmanship. Engle chairs provide outstanding quality and craftsmanship, backed by a warranty you can rely on. ■
