## Composi-Tight 3D Fusion Sectional Matrix System

**G**arrison's new Composi-Tight 3D Fusion Sectional Matrix is engineered to successfully complete a wider variety of Class II composite restorations. This comprehensive kit includes three varieties of separator rings, five sizes of matrix bands, four sizes of interproximal wedges and a ring placement forceps. Composi-Tight 3D Fusion is indicated for use in posterior Class II MO/DO, MOD and wide-preparation restorations.

The new system draws on Garrison's more than 20 years of sectional matrix leadership to produce its most comprehensive and easy-to-use system. The three-ring system consists of a short- (blue), tall- (orange) and dentistry's first wide-preparation (green) separator rings. All three incorporate Garrison's exclusive Soft-Face silicone tips for flash reduction and Ultra-Grip retention extensions that eliminate ring "spring-off."

Five sizes of ultrathin, dead-soft nonstick sectional matrix bands

have the addition of a Grab-Tab on the occlusal edge to simplify band placement and removal. These are coupled with four sizes of Garrison's award-winning Composi-Tight 3D Fusion Ultra-Adaptive wedges. These wedges feature soft "fins" that smoothly adapt matrix bands to tooth irregularities and prevent wedge back-out. Garrison has engineered a drop-forged stainless steel ring placement forceps that make ring placement significantly easier over the largest of molars regardless of hand size or strength. ■
