EDGE ENDO® FIREFIRE™ NI TI FILES are a revolution in rotary files. Fully compatible with the system you already use, but better. Our files surpass all other files in resistance to cyclic fatigue*, and offer flexibility never before experienced in a file. FireWire™ NiTi enables EdgeEndo® files to not “bounce back.” This preserves canal anatomy and dentin while carefully following the canal as they go down smooth and easy. What’s more, EdgeEndo® files are half the cost of the old files they replace, saving your practice thousands of dollars each year. The future of advanced design is here.
TWICE AS GOOD HALF THE COST.
