

iOCam HD Video System

DentLight has launched iOCam, a lightweight loupe-mounted HD camera that provides live video streaming and recording capability at 1280x720 pixel resolution.

The product uses advanced high-resolution digital imaging technology with distortion-free optical magnifications to document your procedures and enhance communication with patients and staff. It provides adjustable focal distance to match with individual working distances for 2.0x, 3.0x and 5.0x magnified images.

At just 12 grams, the product easily fits to all major loupes with custom loupe adapters, and is compatible with most miniature head-lights.

For more information, call (800) 763-6901 or visit dentlight.com.

Jiffy Universal Ceramic Finishing System

Ultradent Products has introduced the Jiffy Universal Ceramic Finishing System, a universal finishing system for high-strength ceramics.

The Jiffy Universal Ceramic Finishing System is a finishing solution in which all adjusters and polishers work interchangeably on porcelain, lithium disilicate and zirconia. Each convenient kit (extraoral or intraoral) includes everything the dentist needs, eliminating the need to purchase unnecessary or multiple components and allowing the clinician to create a smooth, beautiful, high-gloss finish on all ceramic restorations. Jiffy Universal allows for universal application, eliminating the need for multiple grinders and polishers, saving the clinician time and money.

For more information, call (800) 552-5512, or visit ultradent.com.

New Products

If you would like to submit a new product for consideration to appear in this section, please send your press releases to arselia@farranmedia.com.

EverEdge 2.0

Hu-Friedy has introduced EverEdge 2.0, its latest innovation in hand-scaling instrumentation.

Developed using a proprietary heat-treatment process and enhanced finishing techniques, the product's optimized steel has superior edge retention and wear characteristics that will last the entire life of the instrument. EverEdge 2.0 scalers can be resharpened at any point to extend the scaler's life and value.

EverEdge 2.0 instruments are available in the original EverEdge diamond-knurled, large-diameter handle, as well as the Resin 8 Colors handle, a lightweight resin handle featuring a color-coded system to easily identify scalers and curettes that correspond to specific areas of the mouth. The new purple grips allow for easy identification of the EverEdge 2.0 scalers in each setup.

For more information, call (800) HU-FRIEDY or visit hu-friedy.com/ee2.

Advanced Curing System

The new SiriusMax Advanced Curing System features a powerful and elegant all-aluminum design that is built for durability and efficiency. The product's 90-degree swivel-head functionality and slim profile design means better ergonomics, easier access and more precise placement.

An easy-to-set, customizable menu offers multiple output intensity and duration options from three different power levels: Normal at 1200 mw/cm², High at 1400 mw/cm², and Xtra at 3000 mw/cm². SiriusMax also hosts an onboard white-light transillumination feature to aid in caries diagnosis and finding fractures in teeth, and to enhance visual guidance during procedures.

For more information, visit thecuringlight.com.

Nano Gutta Percha Points

Obtura Spartan Endodontics has introduced new Nano Gutta Percha Points, which are precision-machine-made for ideal cone fitting, and have a lower working temperature and a longer working time.

Nano Gutta Percha Points are made with a newly developed precision manufacturing process so they are shaped to precisely correspond to the exact apical size and taper of almost any file system used to shape canals.

This proprietary formulation significantly improves heat conductivity and the ability to work at a lower working temperature, giving the doctor more time to treat the canal without rushing to complete procedures before the material hardens.

For more information, call (800) 344-1321 or visit obtura.com.

SalivaMAX

Forward Science, the developer of some of the latest technologies for oral-cancer screening and diagnostics, has announced its latest product, SalivaMAX.

SalivaMAX is a prescription-strength rinse that's indicated for the relief of xerostomia. The product is composed of powdered ingredients that, when mixed with 1 ounce of water, form a supersaturated calcium phosphate solution, which has been clinically proven to provide relief of dry-mouth symptoms. Patients swish with SalivaMAX for one minute, and it can be administered several times per day, depending on the dry-mouth severity.

For more information, visit salivamax.com or email info@salivamax.com.

Cavex Bite & White ABC Masterkit

Dutch manufacturer Cavex announced the North American launch of its Cavex Bite & White ABC Masterkit. The product is designed to make it easier for dental practices to provide whitening services to patients concerned about excessive sensitivity, unnaturally white teeth, or high cost.

To address these patient concerns, Cavex has utilized a three-step process—activation, brightening, conditioning—that dramatically reduces sensitivity while providing a natural white smile at an affordable price.

Dental practices can use the product as an at-home means of supplementing in-office whitening, or as a convenient, time-saving alternative to in-office whitening, with minimal staff training required.

For more information on the Cavex Bite & White ABC Masterkit or other Cavex products, visit cavex.nl/en.

DOVE Backflow Prevention SE Valve

Stoma Dental introduced a backflow prevention saliva ejector (SE) valve in conjunction with the 151st Midwinter Meeting of the Chicago Dental Society. Stoma's new DOVE Backflow Prevention SE Valve is a one-way valve that virtually eliminates backflow cross-contamination risk between dental patients.

All DOVE HVE and SE valves are simple to operate. A smooth and easy switch activation by the dentist, assistant or hygienist operates the open and closing mechanism. At the end of each procedure, the valves can be pulled off of the vacuum line and discarded. The entire process takes a matter of seconds, making their use much more efficient and cost-effective than metal valves. The DOVE system adapts to a wide range of single-use tips, and includes tailcaps to reduce noise and also bacterial aerosols between DOVE valve replacements.
