

GLIDEWELL

DEDICATED TO INNOVATION SINCE 1970

Glidewell is one of the world's leading manufacturers of custom restorative services, dental materials and technologies. Founded in 1970 in Orange County, California, the company is dedicated to developing innovations that simplify treatment, optimize results and improve lives. Glidewell offers an array of restorative, implant and preventive services created with CAD/CAM workflows that enhance quality and maintain affordability for dentist and patient alike.

BRUXZIR ZIRCONIA

The BruxZir Zirconia family of restorative materials offers clinicians high-strength solutions that exceed patient aesthetic expectations. BruxZir Zirconia benefits from proprietary processing methods, which result in restorations with best-in-class translucency, enhanced shade-matching and lasting toughness. Available in two formulations, BruxZir Zirconia provides solutions for virtually any indication. Choose BruxZir Full-Strength for

functionally demanding cases or choose BruxZir Esthetic for situations that require a premier appearance.

BruxZir restorations have been proven by independent researchers and clinicians. The research arm of the *Gordon J. Christensen Clinicians Report* concluded that BruxZir demonstrates outstanding performance, even after 10 years of clinician service. Moreover, *Clinicians Report* recently stated that, "BruxZir is the most successful tooth-colored restoration in the history of dentistry."

New for 2021, all Glidewell-made BruxZir restorations are now warrantied for life. The BruxZir lifetime warranty is designed to give clinicians added peace of mind and to reinforce the positive relationship between practitioner and patient. Should a dentist need to replace the BruxZir restoration for any reason over the patient's lifetime, Glidewell will remake the restoration at no cost to the dentist.

BIOTEMPS PROVISIONALS

BioTemps Provisionals rely on digital workflows to set up restorative cases for success. Virtually designed and then fabricated with computer-aided technologies, these lab-made temporaries are delivered to the dental office in advance of the preparation appointment. Using preoperative impressions and a bite registration, the lab creates a digital mockup of the desired restorative result and then cuts back a preestablished amount from the intaglio surfaces to develop the shape of the provisionals.

In addition to ensuring that patients have a beautiful smile throughout the entire provisionalization phase, BioTemps also allow for digital duplication. If the clinician and patient approve of the provisional aesthetics, the BioTemps digital files can be used to create the definitive restorations and deliver a perfect match.

FASTMILL.IO IN-OFFICE MILL

The Glidewell.io In-Office Solution combines the power of the Fastmill.io mill with exclusive CrownAI technology to eliminate the learning curve from same-visit crown design. The power behind the Fastmill.io allows clinicians to deliver single-visit BruxZir Now zirconia restorations straight from the mill with no oven wait—just cement and move on. Its small footprint, lab-direct support, affordable price point and attractive ROI make it a fit for any Townie practice.
