

JAZZ IMAGING

SOLO X-RAY SENSOR

Since the late 1990s sensors have been sold the same way: Invest \$9,000–\$16,000 upfront and then pay up to \$2,000 annually to keep that sensor under a warranty and support agreement. Jazz Imaging was founded by engineers who spent decades building sensors for all the major brands and created a sensor that made clinical and financial sense for doctors.

Jazz introduced the Solo sensor in 2017 at the Chicago Midwinter Meeting. Since then, thousands of practices have added Solo to their practices for its image quality and comfort, and dentists have taken more than 10 million X-rays in thousands of U.S. offices. They also enjoy the Jazz Club subscription model. Practices can add a sensor that stays under a lifetime zero-deductible warranty and includes support and all software upgrades. Solo works seamlessly in all major imaging software, such as Dexis, Gendex, Carestream and Schick.

"I developed sensors for [other companies] for a decade. Great products, but doctors felt they were overcharged and not supported well. They demanded an alternative, so I started Jazz Imaging." — Todd Miller, founder and CEO

HIGHLIGHTS

- **Single-size sensor.** Highest ratio of active image area to size in the market today. Patented technology allows Solo to produce a Size #2 image with the comfort of a Size #1.
- **Direct integration.** Solo was designed and built to shoot directly into all major imaging software. It will behave like your current sensors. No additional clicks, guaranteed.
- **The Jazz Club.** For a one-time sign-up fee of \$1,999 and for \$139 a month, practices can add a sensor that stays under a lifetime zero-deductible warranty and includes support and all software upgrades.
