

# DENTSPLY SIRONA

## SURESMILE CLEAR ALIGNERS

**A** recent three-year retrospective analysis by Dentsply Sirona of more than 100,000 completed SureSmile Clear Aligner cases showed that 75% of those cases required no refinements. Reducing refinements could have a positive impact on overall patient satisfaction and dental practice productivity by limiting chair time spent treating patients brought back into the practice for refinements.

Doctors may think refinements are just part of supplying clear aligner treatment, but with three out of four of those patients not needing refinements, SureSmile Clear Aligners provide the predictable results doctors want and patients expect. Plus, treatment planning is easy with support from the SureSmile Digital Lab and software that works with most common intraoral scanners, including PrimeScan.

SureSmile Aligners also provide outstanding patient value with the “Complete Case” option, which not only includes aligners at a flat-rate price but also supplies faster, brighter smiles by

including the SureSmile Whitening Kit and the SureSmile VPro Vibration Device. This device is only available in the United States.

It may be time for providers to realign their expectations for clear aligner treatment and discover that a better experience with SureSmile aligners may be possible for patients and their practice.

### HIGHLIGHTS

- 75% of SureSmile cases require no refinements, which saves chair time.
- Easy treatment planning works with most scanners, plus the SureSmile Digital Lab can help treat simple to complex cases.
- Expert practice support tailored to your goals from the SureSmile team, with easy onboarding from SureSmileU and DS Academy education.
