

DENTSPLY SIRONA

SURESMILE CLEAR ALIGNERS

In a recent three-year retrospective analysis by Dentsply Sirona of more than 150,000 completed SureSmile Clear Aligner cases, it was shown that 75% of those cases required no refinements. Reducing refinements could have a positive impact on overall patient satisfaction and dental practice productivity by reducing the number of visits and chair time required when bringing patients back into the practice for refinements.

Doctors might believe that refinements are just part of supplying clear aligner treatment, but with three out of four of those patients not needing refinements, SureSmile Clear Aligners provides the predictable results doctors want and patients expect. Plus, treatment planning has never been so easy, with support from the SureSmile Digital Lab and software that works with most common intraoral scanners, including PrimeScan.

SureSmile aligners also provide outstanding patient value with the Complete Case option, which includes aligners at a flat-rate price, and supplies faster, brighter smiles by including the SureSmile Whitening Kit and the SureSmile VPro

high-frequency device.

It may be time for dental providers to realign their expectations for clear aligner treatment and discover that a better experience with SureSmile aligners may be possible for patients and their practices alike.

HIGHLIGHTS

- 75% of SureSmile cases **required no refinements**, which saves chair time.
- **Easy treatment planning** that works with most scanners, plus the SureSmile Digital Lab can help treat simple to complex cases.
- **Expert practice support** tailored to your goals from our team with easy onboarding from SureSmileU and DS Academy education.
