

EZAIM SOFTBITE SENSOR HOLDER

The EzAim SoftBite sensor holder with peel-and-stick adhesive firmly adheres to digital sensors while allowing for extra patient comfort with a cushioned bite tab. The cushioned tab allows patients to comfortably bite harder on the tab for more precise imaging while having a shortened design for greater accessibility. The single-use, disposable bite tabs require no extra parts or setup.

Pac-Dent's EzAim X-Ray Positioning System features color-coded disposable sensor holders compatible with all sensors on the market. EzAim SoftBite Tabs work with existing aiming kits or with the EzAim positioning system.
