GLIDEWELL

5 MILLION REASONS TO TRUST GLIDEWELL

In 2024 alone, Glidewell produced nearly 5 million crowns and prosthetic appliances for more than 80,000 U.S. dentists.

These annual numbers continue to grow, year after year, underscoring the trust dental professionals place in a partner who delivers on speed, quality, affordability and peerless clinical support.

All Glidewell restorations are manufactured in the United States, in production centers featuring cutting-edge automation, artificial intelligence and U.S.-based technical advisors to ensure every restoration meets its clinical requirements.

With 55 years of dedicated lab experience and a proven commitment to relentless innovation, Glidewell continues to ensure the advancement of modern dentistry.

BRUXZIR ZIRCONIA

The BruxZir Zirconia family of materials originally built its name on strength. After nearly two decades of continuous innovation, the BruxZir brand offers even more to dentists and patients—delivering confidence, speed and beauty.

BruxZir Zirconia has been clinically validated by independent researchers and is trusted by dentists worldwide, with more than 35 million units delivered. Glidewell is so confident in its American-made BruxZir restorations that the company backs them with a lifetime warranty. Should the dentist ever experience a challenge, the lab will remake the case for free.

Today, monolithic BruxZir cases from Glidewell need only three days in lab, regardless of impression method. For maximum speed, Glidewell now offers Next-Day BruxZir Zirconia service. Scan today, receive tomorrow. For just \$149 per unit, dentists can choose either BruxZir Esthetic or Full-Strength and experience the same great restorations with no loss in quality thanks to proprietary automation systems only at Glidewell.

Today's BruxZir formulations provide patient-pleasing beauty in addition to toughness. The latest innovation, Fusion with BruxZir Zirconia, takes aesthetics to greater heights. Fusion with BruxZir restorations replicate the dentin-enamel relationship by joining two distinct zirconia layers, creating results virtually indistinguishable from real teeth.

GLIDEWELL HT

The Glidewell HT Implant System has helped thousands of dentists excel in implant dentistry by reducing surgical and restorative costs through a simplified surgical protocol, a 99.2% success rate, and support from the most experienced dental lab in the U.S.

And now, new and improved surgical kits refined by eight years of clinical feedback, allow for even more efficient implant placement and restoration, while a 6.0-mm-diameter implant was launched in June 2025 for expanded clinical versatility.

Manufactured in Irvine, California, from high-strength titanium alloy, the system features a straightforward drilling sequence with length-specific drills, and the implant's deep, sharp threads support excellent primary stability in all bone types.

In support of helping clinicians broaden patient access to care while growing their practices, Glidewell HT Implants are priced at only \$99 each and save you 20% on implant lab fees with Glidewell.

GLIDEWELL.IO IN-OFFICE SOLUTION

Deliver fully sintered BruxZir Now restorations in just one appointment with the Glidewell.io in-office solution. Combining AI-powered one-click designs and ongoing training and support, this CAD/CAM system is the easiest way to optimize your practice with a digital workflow. That's why doctors like Dr. Thomas Rolfes of Costa Mesa, California, say, "The productivity we can accomplish during these appointments has greatly improved how our practice functions—and our patients are loving the benefits, too."
