

ORTHOACCEL

Introducing AcceleDent Optima

AccelerDent Optima is an advanced accelerated orthodontic device, with a comprehensive suite of technology-driven features. An FDA-cleared vibratory orthodontic device, AcceleDent Optima is powered by patented SoftPulse technology that produces pulsating forces clinically shown to stimulate cellular activity in orthodontic treatment and to speed up bone remodeling.

With AcceleDent, doctors report that they are expanding the range of patients they're clinically confident in treating. Difficult or advanced movements can become easier to achieve in the planned amount of time. In addition to helping orthodontists achieve predictable clinical outcomes, AcceleDent is clinically proven to safely and effectively speed up tooth movement by as much as 50 percent while reducing orthodontic discomfort.

New features

Designed with enhanced patient convenience in mind, Optima is a smaller, lighter device that is waterproof and connects with smartphones and tablets through Bluetooth. The device's small charging case enables patients to wirelessly charge the activator, which has a five- to seven-day battery life. To receive the benefits of accelerated treatment, it is important for patients to use the device daily for 20 minutes.

Introducing the AcceleDent app

AcceleDent Optima is the first and only orthodontic device that directly connects patients and practices with monitoring, direct messaging and rewards via the AcceleDent app, which can be downloaded via iTunes and Google Play. The HIPAA-compliant app allows patients to track their usage, set reminder notifications

and compare their progress to other AcceleDent patients across the world. Patients who use AcceleDent for 20 minutes daily as instructed will earn awards on the app's Achievements screen.

Orthodontic practice staff can view this real-time compliance data from each AcceleDent Optima patient via a web portal that is customized for each AcceleDent provider. This 24/7 access to compliance data will allow for more proactive case management, including more informed scheduling, and an overall increase in practice efficiency. The compliance data also enables clinical teams to compliment patients who are excelling with compliance and to encourage low-compliant patients.

Having listened to feedback from patients and practices, OrthoAccel believes that the features of AcceleDent Optima and the AcceleDent app will encourage patients to remain engaged and motivated throughout treatment. ■
