BONDING AGENTS

3M Oral Care: Scotchbond Universal Plus Adhesive

The first universal adhesive with dentin-like radiopacity, it offers all the benefits of its predecessor and adds greater control and predictability. It provides gold standard adhesion to all dental substrates, bonds and seals caries-affected dentin to support minimally invasive dentistry and has virtually no postop sensitivity.

—and—

Kerr: OptiBond Products

The OptiBond family of bonding agents is the gold standard for adhesion. Powered by the GPDM monomer and backed with more than 20 years of clinical success. OptiBond GPDM monomer ensures more effective and reliable adhesion to both the tooth structure and the resin material, creating a better compatibility with both substrates and an overall bond strength.

TG'S TAKE: "If we were playing a game of word association and I said, 'restorative dentistry,' there's a good chance your answer would include 3M or Kerr. These two dentist-household names have made bonding agents for the always evolving 'generations' that are often marked by how many bottles are needed. Both companies have excellent reputations for thorough research and development and their products are often the standard by which others are measured."

GINGIVAL RETRACTION MATERIALS

Ultradent Products: Ultrapak Retraction Cord

Ultrapak cord is made of 100% cotton, knitted into thousands of tiny loops to form long, interlocking chains. This unique knitted design exerts a gentle, continuous outward force following placement as the knitted loops seek to open. Optimal tissue displacement occurs in three to eight minutes.

**MULTIYEAR
WINNER**
since 2003

TG'S TAKE: *"Ultradent has a thick catalog filled with materials and equipment, and some of its oldest members of that catalog are still winning awards. The method for making Ultrapak retraction cord is so special that if you take a tour of the Ultradent facility, this room is off-limits! Even in the era of digital dentistry, tissue must be managed for a crisp, clear view of the finish line. Retraction cord remains as one of the best options for achieving this goal."*
